Living Roof Stewardship
September 10, 2021

We arrived today to conduct a routine Stewardship visit. The green roof is in healthy condition.

We removed all weeds encountered today, such as this noxious grass.

We inspected all drainage areas, removing any debris or plant material found within.

We removed plant material from the metal edging to maintain a tidy appearance.

We transplanted Sedum cuttings harvested from healthy plants onsite to supplement areas of sparse vegetation.

We trimmed all spent plant material to make room for new growth.

After Stewardship.

After Stewardship.

After leaving the roof, we made sure the hatch was closed tightly.

Thank you for accommodating us today. We look forward to our next Stewardship visit.
